

Turf & Soil Diagnostics

On-site and Physical Testing Laboratories since 1991

Accredited Laboratories

Testing programs for turf and landscape growing media, rootzone mixes, soils, sands, gravels, drainage media, and amendments.

The Turf & Soil Diagnostics lab network was formed from the merger of the Hummel and Co. Lab in New York and Turf Diagnostics & Design in Kansas.

Our labs have provided performance testing and/or consulting for thousands of golf courses, sports fields and landscapes. Our quality, expertise and experience are unsurpassed.

- Specified testing agent by numerous top landscape, golf course, and sports field design firms.
- Natural and synthetic sports turf specialists. We provide testing services for professional football, baseball, and soccer fields; college sports fields, and multitudes of intramural, high school and parks & rec fields.
- Testing laboratory for award winning green roof and landscape designs.
- Innovative test procedures make us the go to testing lab for golf green and bunker renovations, and fairway capping projects.
- Leading research laboratory for the turf and landscape markets. We provide new and innovative test procedures.
- Proud members of the Sports Turf Managers Association, Golf Course Builders Association of America, Heart of America Golf Course Superintendents, GCSA of New York, Texas Turfgrass, American Sports Builders Assoc. MOKAN STMA, Sports Turf Managers of New York, Western Nursery & Landscape Association, and Green Roofs for Healthy Cities.

Bunker Sand Evaluations

Testing is performed according to strict laboratory SOPs that meet or exceed industry standards.

Our accredited testing labs provide accurate timely results ensuring that your project gets the right information, right on time!

Gmax Field Hardness

Turf Diagnostics' Gmax testing is an integral part of synthetic turf field management.

Turf & Soil Diagnostics' services benefit landscape and turf managers, architects, construction companies, suppliers, and the site itself.

What Can We Do For You?

• Laboratory Testing Services

Testing of physical properties of soils, aggregates, turf, and landscapes. Our reports provide information needed to make sound management decisions, ensure quality materials are used during construction, and pinpoint problems in existing systems.

Innovative research and development for industry leaders, organizations and suppliers. We provide scientific data regarding the benefits and potential uses of products and practices.

• Green Roofs and Landscapes

Choosing proper materials is a key to sustainable design. We have testing programs to evaluate growing media, filter and drain layers for compliance with project specifications, as well as ASTM, FLL, and industry standards.

• Sports Fields

Diagnostic and construction testing programs for natural & synthetic turf fields.

Limit liability, protect your athletes and protect your investment with *Turf Diagnostics*. Our Gmax testing services are an integral part of synthetic field maintenance.

• Golf Courses

Unsurpassed expertise in golf course material evaluation. Construction material testing and consulting ensures quality materials in the golf course. Diagnostics can pinpoint problems with turf growth, drainage, greens or bunker sand performance.

• On Site Evaluations

Flexible testing times are available to meet client needs. Testing programs can be customized to meet client needs.
